

Challenge Project 2 - Bayesian Spam Filtering

1) input: "WATCH ANIME NOW"

- $P(\text{WATCH})$ - $P(\text{"WATCH"} | \text{SPAM}) \rightarrow 0.095$
- $P(\text{"WATCH"} | \text{Not SPAM}) \rightarrow 0.053$
 - $P(\text{ANIME})$ - $P(\text{"ANIME"} | \text{SPAM}) \rightarrow 0.095$
- $P(\text{"ANIME"} | \text{Not SPAM}) \rightarrow 0.053$
 - $P(\text{NOW})$ - $P(\text{"NOW"} | \text{SPAM}) \rightarrow 0.095$
- $P(\text{"NOW"} | \text{Not SPAM}) \rightarrow 0.053$
- $P(\text{WATCH ANIME NOW} | \text{SPAM}) = 0.095 \cdot 0.095 \cdot 0.095 = 0.000857375$
- $P(\text{WATCH ANIME NOW} | \text{Not SPAM}) = 0.053 \cdot 0.053 \cdot 0.053 = 0.000148877$
- $P(\text{WATCH ANIME NOW} | \text{SPAM}) > P(\text{WATCH ANIME NOW} | \text{Not SPAM})$
therefore "watch anime now" is likely to be spam.

2) input: "TAKEOUT AND ANIME AT MY HOUSE"

- | | |
|---|--|
| • $P(\text{TAKEOUT})$ - $P(\text{TAKEOUT} \text{SPAM}) \rightarrow 0.0476$
- $P(\text{TAKEOUT} \text{Not SPAM}) \rightarrow 0.105$ | • $P(\text{AT})$ - $P(\text{AT} \text{SPAM}) \rightarrow 0.0476$
- $P(\text{AT} \text{Not SPAM}) \rightarrow 0.105$ |
| • $P(\text{AND})$ - $P(\text{AND} \text{SPAM}) \rightarrow 0.0476$
- $P(\text{AND} \text{Not SPAM}) \rightarrow 0.053$ | • $P(\text{MY})$ - $P(\text{MY} \text{SPAM}) \rightarrow 0.0476$
- $P(\text{MY} \text{Not SPAM}) \rightarrow 0.053$ |
| • $P(\text{ANIME})$ - $P(\text{ANIME} \text{SPAM}) \rightarrow 0.095$
- $P(\text{ANIME} \text{Not SPAM}) \rightarrow 0.053$ | • $P(\text{HOUSE})$ - $P(\text{HOUSE} \text{SPAM}) \rightarrow 0.095$
- $P(\text{HOUSE} \text{Not SPAM}) \rightarrow 0.105$ |

- $P(\text{TAKEOUT AND ANIME AT MY HOUSE} | \text{SPAM}) = 0.0476^4 \cdot 0.095^2 = 4.63314 \cdot 10^{-8}$
- $P(\text{TAKEOUT AND ANIME AT MY HOUSE} | \text{Not SPAM}) = 0.105^3 \cdot 0.053^3 = 1.72344 \cdot 10^{-7}$
- $P(\text{input} | \text{SPAM}) < P(\text{input} | \text{Not SPAM})$
therefore "takeout and anime at my house" is likely to not be spam.

3) input: "SELL ME YOUR ANIME COLLECTION"

- $P(\text{SELL})$
 - $P(\text{SELL} | \text{SPAM}) = 0.095$
 - $P(\text{SELL} | \text{Not SPAM}) = 0.105$
- $P(\text{ME})$
 - $P(\text{ME} | \text{SPAM}) = 0.0476$
 - $P(\text{ME} | \text{Not SPAM}) = 0.053$
- $P(\text{YOUR})$
 - $P(\text{YOUR} | \text{SPAM}) = 0.095$
 - $P(\text{YOUR} | \text{Not SPAM}) = 0.053$
- $P(\text{ANIME})$
 - $P(\text{ANIME} | \text{SPAM}) = 0.095$
 - $P(\text{ANIME} | \text{Not SPAM}) = 0.053$
- $P(\text{COLLECTION})$
 - $P(\text{COLLECTION} | \text{SPAM}) = 0.0476$
 - $P(\text{COLLECTION} | \text{Not SPAM}) = 0.053$

$$• P(\text{SELL ME YOUR ANIME COLLECTION} | \text{SPAM}) = 0.095^3 \cdot 0.0476^2 = 1.94261e^{-6}$$

$$• P(\text{SELL ME YOUR ANIME COLLECTION} | \text{Not SPAM}) = 0.053^4 \cdot 0.105 = 8.28501e^{-7}$$

$$• P(\text{input} | \text{SPAM}) < P(\text{input} | \text{Not SPAM})$$

therefore "sell me your anime collection" is likely to be spam.
